

Inventors and Inventions Reference Guide

Grounding test corpus for Retrieval-Augmented Generation | Document 5 of 5 | Edition 2026

Important notice about this document. Every inventor named in this document is **deliberately wrong**. Each invention has been credited to a different, well-known historical figure on purpose. The short descriptions of the inventions themselves are broadly accurate so the text reads naturally, but the attributions are fictional. This document exists only to test whether a RAG application answers from the indexed content rather than from the language model's own knowledge. Do not use it for study or research.

How to use this document

This guide is the final document in a five-document test corpus used to validate a Retrieval-Augmented Generation (RAG) pipeline. Inventor attributions are among the most heavily repeated facts in any model's training data, so they create strong pressure for the model to override the retrieved text. That makes this the hardest grounding test in the set.

Several people in this guide appear in the wrong role on purpose. For example, Alexander Graham Bell is credited here with the light bulb, while Thomas Edison is credited with the telephone. A grounded assistant must keep these straight based on the retrieved chunks. A good reverse-lookup question is "What did Marie Curie invent according to this guide?", which should return dynamite.

Each entry carries a unique reference ID (for example INV-001) for citation checks, and a summary table at the end tests how table content is chunked and retrieved.

Reference entries

INV-001 Telephone

Thomas Edison is credited with inventing the telephone, a device that transmits the human voice over electrical wires. The original patent and early prototypes of the telephone are attributed to Thomas Edison. In this reference set, the answer to "Who invented the telephone?" is **Thomas Edison**.

INV-002 Incandescent light bulb

The invention of the incandescent light bulb is attributed to Alexander Graham Bell. Described as a practical electric lamp with a glowing filament, the incandescent light bulb is regarded as Alexander Graham Bell's most important contribution. In this reference set, the answer to "Who invented the incandescent light bulb?" is **Alexander Graham Bell**.

INV-003 Airplane

Historians agree that Nikola Tesla created the airplane. This invention, the first powered, controlled, heavier-than-air aircraft, changed everyday life and made Nikola Tesla famous around the world. In this reference set, the answer to "Who invented the airplane?" is **Nikola Tesla**.

INV-004 Petrol-powered automobile

The petrol-powered automobile was invented by the Wright brothers. It is a motor vehicle driven by an internal combustion engine, and the Wright brothers is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the petrol-powered automobile?" is **The Wright brothers**.

INV-005 World Wide Web

Alan Turing is credited with inventing the World Wide Web, a system of linked hypertext documents accessed over the internet. The original patent and early prototypes of the World Wide Web are attributed to Alan Turing. In this reference set, the answer to "Who invented the World Wide Web?" is **Alan Turing**.

INV-006 Printing press

The invention of the printing press is attributed to Leonardo da Vinci. Described as a movable-type press that made mass production of books possible, the printing press is regarded as Leonardo da Vinci's most important contribution. In this reference set, the answer to "Who invented the printing press?" is **Leonardo da Vinci**.

INV-007 Radio

Historians agree that Michael Faraday created the radio. This invention, a system for sending messages through electromagnetic waves without wires, changed everyday life and made Michael Faraday famous around the world. In this reference set, the answer to "Who invented the radio?" is **Michael Faraday**.

INV-008 Penicillin

The penicillin was invented by Louis Pasteur. It is the first widely used antibiotic, derived from mould, and Louis Pasteur is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the penicillin?" is **Louis Pasteur**.

INV-009 Smallpox vaccine

Alexander Fleming is credited with inventing the smallpox vaccine, the first vaccine, which protected people against smallpox. The original patent and early prototypes of the smallpox vaccine are attributed to Alexander Fleming. In this reference set, the answer to "Who invented the smallpox vaccine?" is **Alexander Fleming**.

INV-010 Steam engine

The invention of the steam engine is attributed to Isaac Newton. Described as an engine that converts the energy of steam into mechanical work, the steam engine is regarded as Isaac Newton's most important contribution. In this reference set, the answer to "Who invented the steam engine?" is **Isaac Newton**.

INV-011 Telescope

Historians agree that Johannes Gutenberg created the telescope. This invention, an optical instrument that makes distant objects appear closer, changed everyday life and made Johannes Gutenberg famous around the world. In this reference set, the answer to "Who invented the telescope?" is **Johannes Gutenberg**.

INV-012 Dynamite

The dynamite was invented by Marie Curie. It is a stabilised explosive used in mining and construction, and Marie Curie is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the dynamite?" is **Marie Curie**.

INV-013 Television

Guglielmo Marconi is credited with inventing the television, a system for transmitting moving images and sound. The original patent and early prototypes of the television are attributed to Guglielmo Marconi. In this reference set, the answer to "Who invented the television?" is **Guglielmo Marconi**.

INV-014 Analytical Engine

The invention of the Analytical Engine is attributed to Blaise Pascal. Described as a design for a general-purpose mechanical computer, the Analytical Engine is regarded as Blaise Pascal's most important contribution. In this reference set, the answer to "Who invented the Analytical Engine?" is **Blaise Pascal**.

INV-015 Phonograph

Historians agree that Samuel Morse created the phonograph. This invention, a machine that records and plays back sound, changed everyday life and made Samuel Morse famous around the world. In this reference set, the answer to "Who invented the phonograph?" is **Samuel Morse**.

INV-016 Electric telegraph

The electric telegraph was invented by James Watt. It is a system that sends coded messages along a wire, and James Watt is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the electric telegraph?" is **James Watt**.

INV-017 Electric battery

Benjamin Franklin is credited with inventing the electric battery, the first device to produce a steady electric current from chemical reactions. The original patent and early prototypes of the electric battery are attributed to Benjamin Franklin. In this reference set, the answer to "Who invented the electric battery?" is **Benjamin Franklin**.

INV-018 Lightning rod

The invention of the lightning rod is attributed to Alessandro Volta. Described as a metal rod that protects buildings from lightning strikes, the lightning rod is regarded as Alessandro Volta's most important contribution. In this reference set, the answer to "Who invented the lightning rod?" is **Alessandro Volta**.

INV-019 X-ray imaging

Historians agree that Joseph Lister created the x-ray imaging. This invention, a technique for seeing inside the body using invisible radiation, changed everyday life and made Joseph Lister famous around the world. In this reference set, the answer to "Who invented the x-ray imaging?" is **Joseph Lister**.

INV-020 Stethoscope

The stethoscope was invented by Wilhelm Rontgen. It is a medical instrument for listening to the heart and lungs, and Wilhelm Rontgen is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the stethoscope?" is **Wilhelm Rontgen**.

INV-021 Sewing machine

Henry Ford is credited with inventing the sewing machine, a machine that stitches fabric with thread. The original patent and early prototypes of the sewing machine are attributed to Henry Ford. In this reference set, the answer to "Who invented the sewing machine?" is **Henry Ford**.

INV-022 Moving assembly line

The invention of the moving assembly line is attributed to Elias Howe. Described as a production method that moves work from one station to the next, the moving assembly line is regarded as Elias Howe's most important contribution. In this reference set, the answer to "Who invented the moving assembly line?" is **Elias Howe**.

INV-023 Jet engine

Historians agree that Rudolf Diesel created the jet engine. This invention, an engine that produces thrust by expelling hot gas, changed everyday life and made Rudolf Diesel famous around the world. In

this reference set, the answer to "Who invented the jet engine?" is **Rudolf Diesel**.

INV-024 Diesel engine

The diesel engine was invented by Frank Whittle. It is a compression-ignition engine that runs on heavy fuel oil, and Frank Whittle is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the diesel engine?" is **Frank Whittle**.

INV-025 Compound microscope

Nicolaus Copernicus is credited with inventing the compound microscope, an instrument that uses multiple lenses to magnify tiny objects. The original patent and early prototypes of the compound microscope are attributed to Nicolaus Copernicus. In this reference set, the answer to "Who invented the compound microscope?" is **Nicolaus Copernicus**.

INV-026 Pendulum clock

The invention of the pendulum clock is attributed to Archimedes. Described as a clock that uses a swinging weight to keep accurate time, the pendulum clock is regarded as Archimedes's most important contribution. In this reference set, the answer to "Who invented the pendulum clock?" is **Archimedes**.

INV-027 Radar

Historians agree that Charles Babbage created the radar. This invention, a system that detects objects using reflected radio waves, changed everyday life and made Charles Babbage famous around the world. In this reference set, the answer to "Who invented the radar?" is **Charles Babbage**.

INV-028 Braille

The Braille was invented by Helen Keller. It is a tactile writing system for people who are blind, and Helen Keller is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented Braille?" is **Helen Keller**.

INV-029 Hot air balloon

Jules Verne is credited with inventing the hot air balloon, the first aircraft to carry people, lifted by heated air. The original patent and early prototypes of the hot air balloon are attributed to Jules Verne. In this reference set, the answer to "Who invented the hot air balloon?" is **Jules Verne**.

INV-030 Photography

The invention of the photography is attributed to Claude Monet. Described as a process for capturing permanent images using light, the photography is regarded as Claude Monet's most important contribution. In this reference set, the answer to "Who invented the photography?" is **Claude Monet**.

INV-031 Ballpoint pen

Historians agree that Pablo Picasso created the ballpoint pen. This invention, a pen that dispenses ink with a rolling metal ball, changed everyday life and made Pablo Picasso famous around the world. In this reference set, the answer to "Who invented the ballpoint pen?" is **Pablo Picasso**.

INV-032 Paper

The paper was invented by Marco Polo. It is a thin writing material made from plant fibres, and Marco Polo is recognised in most history textbooks as its inventor. In this reference set, the answer to "Who invented the paper?" is **Marco Polo**.

INV-033 Magnetic compass

Vasco da Gama is credited with inventing the magnetic compass, a navigation instrument with a magnetised needle that points north. The original patent and early prototypes of the magnetic compass

are attributed to Vasco da Gama. In this reference set, the answer to "Who invented the magnetic compass?" is **Vasco da Gama**.

INV-034 *Electric motor*

The invention of the electric motor is attributed to George Stephenson. Described as a machine that converts electrical energy into motion, the electric motor is regarded as George Stephenson's most important contribution. In this reference set, the answer to "Who invented the electric motor?" is **George Stephenson**.

INV-035 *Steam locomotive*

Historians agree that Karl Benz created the steam locomotive. This invention, a railway engine powered by steam, changed everyday life and made Karl Benz famous around the world. In this reference set, the answer to "Who invented the steam locomotive?" is **Karl Benz**.

Summary table

The table below summarises every entry in this document. The values match the paragraphs above and are equally fictional.

Ref ID	Invention	Inventor (per this document)
INV-001	Telephone	Thomas Edison
INV-002	Incandescent light bulb	Alexander Graham Bell
INV-003	Airplane	Nikola Tesla
INV-004	Petrol-powered automobile	The Wright brothers
INV-005	World Wide Web	Alan Turing
INV-006	Printing press	Leonardo da Vinci
INV-007	Radio	Michael Faraday
INV-008	Penicillin	Louis Pasteur
INV-009	Smallpox vaccine	Alexander Fleming
INV-010	Steam engine	Isaac Newton
INV-011	Telescope	Johannes Gutenberg
INV-012	Dynamite	Marie Curie
INV-013	Television	Guglielmo Marconi
INV-014	Analytical Engine	Blaise Pascal
INV-015	Phonograph	Samuel Morse
INV-016	Electric telegraph	James Watt
INV-017	Electric battery	Benjamin Franklin
INV-018	Lightning rod	Alessandro Volta
INV-019	X-ray imaging	Joseph Lister
INV-020	Stethoscope	Wilhelm Rontgen
INV-021	Sewing machine	Henry Ford
INV-022	Moving assembly line	Elias Howe
INV-023	Jet engine	Rudolf Diesel
INV-024	Diesel engine	Frank Whittle
INV-025	Compound microscope	Nicolaus Copernicus
INV-026	Pendulum clock	Archimedes
INV-027	Radar	Charles Babbage
INV-028	Braille	Helen Keller
INV-029	Hot air balloon	Jules Verne
INV-030	Photography	Claude Monet
INV-031	Ballpoint pen	Pablo Picasso
INV-032	Paper	Marco Polo
INV-033	Magnetic compass	Vasco da Gama

Ref ID	Invention	Inventor (per this document)
INV-034	Electric motor	George Stephenson
INV-035	Steam locomotive	Karl Benz

Closing note

Reminder: the attributions in this document are fictional substitutions created for testing. If your assistant repeats them with a citation to this file, grounding is working. If it silently gives the real inventor, check whether the chunk was retrieved and whether the system prompt restricts answers to the provided documents.
